Overview of buttons located on map window

Create object – creates objects on the map (points, polylines, polygons).

Record track – records and saves GPS tracks.

Measure – measures distances and areas on the map.

Compass – returns map northwards.

My location – defines current location of the user.

Notes on map – creates graphic notes on the map.

Search on map, go to coordinates – performs text and numeric search, goes to coordinates in DD and DMS formats.

Additional tools for work with map – saving map extent as bookmark or PDF document.

Main menu – provides options to make settings of the app without leaving the current project, to add layers and maps to project, to manage layers visibility and to perform operations with layers (zoom in/out, delete, view legend, view layer properties, etc.).

Change map scale – zooms in/out the map.

Creating new feature

To create new *feature* on the map, tap the *Create feature* button.

In the appeared menu select the feature type: point, polyline, or polygon.

Specify the feature geometry. To do so, consequentially tap the required places on your map.

To delete the needless point on the map, tap it. To add the new point, pull the edge in the needed place and the point will be added there. To change location of the created point, tap and hold it, then drag it to the new place on the map.

Now select the layer where you want to create the new feature. To do so, in the feature card tap the arrow near the *Save to* option.

In the appeared window you can either select the layer from the currently opened project, or select the previously created layer in the application, or create the new layer.

To select the layer from the existing data, press *Select from data* and select the required layer from the list of GPKG layers stored in the application.

Select from data

To create the new layer, press *Create new*.

Create new

The layer will be automatically created with the default name, but you can rename it, to do so, enter the new name using the keyboard.

To confirm the layer name, tap the tick mark near the layer or tap Enter on the keyboard.

If there are previously added layers in the project, then to create the feature you need to select the required layer from the list. The selected layer will be marked with the check sign.

To select another layer, press its name in the list and it will be marked with the blue check sign.

	Select from data	
\oplus	Create new	

To go to changing parameters of the layer settings, press 11 . See *Changing settings for layer parameters* section for more details about changing layer settings.

To go to saving the created feature and filling in the fields, press the back arrow.

To fill in the *Feature name* and *Description* fields, tap the required line and enter the text.

To complete creation of the feature, press *Create*. The feature will be saved. If you need to cancel this operation during the feature creation process, press *Cancel*.

Creating features by coordinates

To create the feature by coordinates, during the creation process go to the line for entering coordinates in the feature identification card (see *Creating new feature* section for details).

To create the feature by your current location, press *Coordinates by location* \bigcirc button in the identification card of the created feature.

Coordinates of the point feature will be changed to coordinates of the current location. The new point with coordinates of your current location will be added to the created polygon or polyline feature.

To add the feature by manually entered coordinates, go to the line for entering coordinates.

You can change coordinates format, if needed. To do so, select the feature and in the appeared identification window tap the line with coordinates to change the format.

The available coordinate formats are as following:

- Degrees-minutes-seconds;
- Decimal degrees;
- UTM meters (if you selected Projected coordinate system in Settings, *see "Settings" section for details*).

Enter the required coordinates and press Return on the keyboard.

The point with the specified coordinates will be added on the map.

To save the point, press Create.

Creating point feature by photo

To create the new point feature by photo, press *Create feature* button in the map window and in the appeared menu select *Create point by photo* button.

To be able to use this option, in your smartphone settings you need to allow CarryMap app to have access to the device camera and memory. Besides, for all photos made with your device, the option of using geolocation should be enabled.

After pressing the Create point by photo button the camera window will open.

To use this photo, press Use photo.

To take another photo, press *Retake*. In the appeared camera window take the new photo and press *Use photo* again.

To use the existing photo, press Gallery.

Select the required photo from your Gallery. Now coordinates of selected photo will be used to create the point on your map and this photo will be added as attachment to the point.

Changing the layer and its settings is done same as when creating features, see *Changing settings for layer parameters* section for details.

To complete creation of point by photo, press Create button.

To cancel creation of point by photo, press *Cancel* button.

Editing features

To start editing feature, select it on map or find it searching by attribute or coordinates (*see "Searching on map" section for details*) and tap *Edit* icon in the feature identification card.

phot	0: 1, video: 1, d	VIDEO	0	

To add photo or video, tap Take photo/video.

To be able to use this option, in your smartphone settings you need to allow CarryMap app to have access to the device camera and memory.

Take a photo or video and tap *Use photo*, to add it as attachment to the feature.

Added photos can be viewed in the feature's card. To open the photo, tap the appropriate thumbnail.

To delete the added photo, tap *Delete*.

To share/send the added photo, tap Share.

Added videos can be viewed in the *Files* section of the feature's card. To view or delete the video, select it in the card and select the required option.

To add the media file from the gallery that is already on the device, tap *Add from gallery*, to add the document, tap *Add file*.

Measuring distance and area

To measure distance or area, tap the *Measurements* button.

The button will change its color and the tool window will appear. If you want to measure distance, tap *Measure distance* icon.

If you want to measure area, tap *Measure area* icon, accordingly.

To start measurement, sequentially tap the map adding points.

To delete the needless point, tap it again. The calculated distance or area will be shown in the upper part of the measurement window.

Measuring distances and areas is also possible using My location option. To start measurement

from the point of your current location, tap and then . Now the point of your current location will be used as the starting or one of the intermediate points of measurement.

To change measurement units, go to *Settings* of the map menu (note that changing units is possible if you are not in the measurement mode). In the *Measure units* section select the required units:

- *Metric*: meters kilometers;
- *British*: feet miles acres.

MEASURE UNITS	
Meters - Kilometers	~
Feet - Miles - Acres British	

To close the measurement window, tap the cross icon in the upper right corner of the window or tap *Measurements* button again.

To copy the measurement result, long tap the output value and tap *Copy* in the appeared dialog.

Recording track. Creating polygon by track.

To start recording track or to start creating polygon by track, press *(b)*. To record track, press *Record track* button.

To create polygon by track, press *Create polygon by track* button.

When recording track or creating polygon by track starts, the tool button becomes red.

To complete recording track or creating polygon by track, press the tool button \bigotimes again.

In the appeared window select the layer where to you want to save your track or polygon. Enter the track name in the *Feature name* field, if needed.

Note that every 5 seconds your track will be saved automatically. That is, even if your device switches off by some reason, the track will be automatically saved to the selected layer and so will not be lost.

Note that recording track does not hinder any other operations provided with the app (for example, feature creation or editing, adding new layers to project, etc.).

Recording track can be stopped by tapping *Record track* or *Create polygon by track* button again.

Creating project, editing project name

To create project, open CMF2 map and data in GeoPackage, KML, KMX, SHP or GPX format (see *Importing data* for more detail), the project will be created automatically.

The project name can be changed in the map menu, to do so, tap the editing icon.

Enter the new name and tap OK to save edits or Cancel to cancel.

Enter new p	roject name	
Project_29mar2019	X	
Cancel	ОК	

Opening project

To open the project stored on your device, tap *Close map* button in the Main menu.

In the My maps tab all the previously saved and autosaved projects are stored.

To open project, select it from the list. To delete project, select three dots menu and select *Delete*.

To change name for project, tap *Rename* in the menu, enter the new name, and tap *OK*. If you rename autosaved project, it will be moved to the *My projects* section.

To open another map, tap *Close map* button in the Main menu and select the required map from the list. If the selected map is used in other projects, the appropriate message will appear.

Open file as
CarryMapWorldMap.cmf2
Project1_2018_06_21
Cancel

To open map as a project, select the project from the list. If you need to open the map only, select it from the list.

To create new project for this map, add gpkg layers to map (see "Creating new object" and "Working with layers in project" sections for more details).

Working with layers in project

All layers added to project can be viewed in the map menu. You can change the layers order in the project. To do so, long tap the layer and drag it to the required position in the list of layers.

If the layer is the first one in the list, it will be displayed on top of all layers on your map, accordingly. To zoom to layer in the project, tap the three dots menu and select *Zoom to layer*.

To delete layer from the current project, tap three dots menu and select *Remove*.

Selecting symbol when creating feature in the existent layer

When creating the feature in the existent or the newly created layer you can specify different symbols for features of one layer. To do so, create the new feature and select the required symbol in the feature card.

In the appeared list select the required symbol.

Tap *Save* . Changing symbology for the feature is also possible when editing mode is on.

Importing data

To add data to current project, tap in the map menu. All data that can be added to project are shown in the Library section consisting of *Data, My maps* and *Maps catalog* tabs.

The *Data* tab contains data in GeoPackage, KML/KMZ, SHP and GPX formats. To add the existing KML/KMZ, SHP, GPX file to the project, select it and select CarryMap from the list of apps to open this file.

The file will be added to *Data* section.

To add to the project KML/KMZ, SHP or GPX file, select it in the library and it will be automatically converted to GeoPackage format, and you will see the appropriate dialog in the result.

Exporting data

You can share files in GeoPackage, SHP, KML/KMZ, GPX formats or share KML/KMZ, SHP, GPX files stored on your device. To do so, open the layer menu in the *Data* section pressing three dots, and select *Share*.

When sharing gpkg layer you can select the format: SHP, KMZ, GPKG, GPX.

A Morld mane		
Select share format Which format would you like to share this layer in?		
KMZ		
SHP		
GPX		
GeoPackage		
Cancel		

After selecting the format, select the method you want to use to share your file.

Besides, you can share the single feature, to do so, tap it on the map and in the appeared card press *Share*.

Select the data format in the appeared window.

After that, select how you would like to share the feature.

Searching features. Going to feature by coordinates.

To search for GPKG feature or CMF2 by attributes, open the search field pressing the search

Enter the search text to the appeared field (for example, the point name, description, etc.) and press *Return* on the keyboard. The search results will be shown in the list.

All downloaded maps can be viewed in My maps tab.

Finding current location

To define your current location on the map, tap My location

When the *My location* option is enabled, the button changes \checkmark . To disable the option, tap any place on the map. If you tap the location button again, the map will go to the tracking mode and the button will look as \checkmark . Being in the tracking mode, the map will rotate according to your current location. To disable tracking mode, tap any place on the map.

Using external GPS receivers

Starting from version 5.3, CarryMap app supports external GPS receivers from Bad Elf. Using these GPS receivers allows to specify coordinates of your current location more accurately.

Note that making all settings for Bad Elf GPS option is done outside CarryMap app. To connect Bad Elf receiver, enable Bluetooth on your device and all available receivers will be shown in the appeared list.

Settings Bluetooth		
Bluetooth		
Now discoverable as "iPhone (DataEast)".		
DEVICES AND		
Bad Elf GPS #009184		
To pair an Apple Watch with your iPhone, g Watch app.	o to the	

Select the external device and pair it with your mobile device. To do so, select *Pair* on your device and on Bad Elf receiver.

Bad Elf GPS receiver will be connected and you will see the appropriate message.

If by some reason Bad Elf receiver works inappropriately, CarryMap app will automatically use the embedded GPS receiver of your mobile device (if geolocation option is enabled), and the following message will appear.

Connection with Bad Elf GPS receiver has been lost. Temporarily the embedded GPS receiver of your device is being used If geolocation option of your device is disabled and connection with Bad Elf receiver is lost, you will see the following message.

Connection with Bad Elf GPS receiver has been lost. Reconnect Bad Elf device or enable GPS location option to use the embedded GPS receiver of your device

To find your current location and to record tracks, enable geolocation option on your device or check connection with Bad Elf receiver.

Working with protected maps

The maps protected with password are marked with the lock \bigcirc icon. To open the password protected map, tap its name, enter password in the appeared window and tap *OK*.

The map default1 is protected by password Input password	
•••••	
Cancel	ОК

The map will be opened in the project. Now access to this map is allowed, to lock it again, go

to *Maps* tab, press \odot in the appeared window, and then *Proceed*.

Do you really want to lock the map access?	
Cancel	Proceed

Access to your map is locked and you will need to enter password again to continue working.

If the validity time of the map has expired, the map icon looks as ¹⁰⁰ and the appropriate message appears.

The map has expired
